

HOSE PROTECTION

THE PROTECTION SYSTEM FOR HIGH-PRESSURE HOSES

SERVICE

- › Protection against high-pressure hoses lashing around
- › Easy assembly
- › Can be retrofitted with ease
- › Suitable for a whole range of connections

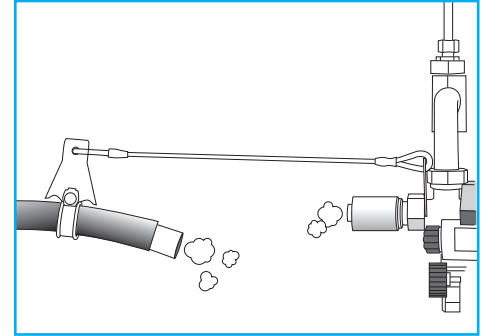

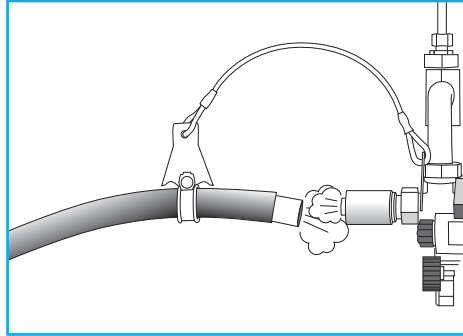

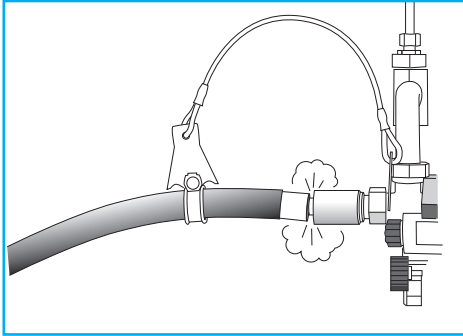

BAUER KOMPRESSOREN HOSE PROTECTION – PROTECTING YOU AND YOUR SYSTEMS

Wear, damage and pressure fluctuations can create dangerous conditions in high-pressure hoses that play a role in the safety of a system.

Our restraining system is designed to give you the extra level of safety you need, providing an effective method of stopping high-pressure hoses from lashing around uncontrollably in the event of a rupture.

BAUER KOMPRESSOREN recommends retrofitting this solution to your systems.

HOW IT WORKS:

- › The retaining ring is secured to the screwed fitting and the clamp is installed around 3 to 5 cm from the end of the hose.
- › If the hose sleeve comes loose, the wire rope prevents the high-pressure hose from breaking away.
- › The operating medium is then able to be released without issues.

CONTENTS OF THE PROTECTION KIT

PART NO.

N39197

CONTENTS

2X N39198 WIRE ROPES

2X N39199 SECURING CLAMPS

TIP: The kit is designed to secure the hose on BOTH sides.

Our BAUER KOMPRESSOREN hose protection solution also enables you to meet the important system safety requirements stipulated by Directive 2006/42/EC.
